Let us schedule you one today!

Eyemagination Optical is excited to offer the following **optional** annual health screening for \$30. These tests are **not** covered by your vision or medical insurance and is payable at the time of service. You can choose to waive these state-of-the-art tests by indicating below and you will not incur any additional fees. Should the screening find any medical abnormalities, our doctors may request that you return for a thorough medical evaluation (the following office visits and medical testing may be billed to your medical insurance and will be subject to applicable copays/deductibles). These tests do not require dilation, but are not in place of one. The first scan acts as a baseline, and future scans are compared with previous scans for comparative diagnosis.

Retinal Photography: Our retinal camera takes a quick and painless digital image of your retina, the tissue responsible for allowing you to see. This technology assists in determining the health of your eyes, and can help identify diseases like diabetes, glaucoma, macular degeneration, and many more conditions that may affect the health of your eyes.

Optical coherence tomography (OCT): is a state of the art imaging technique that uses light to capture a cross sectional image, including the optic nerve, and the macula. It helps diagnose macular degeneration, glaucoma, vitreous detachment and retinal swelling. It is essential in following the progression of diabetic macular changes and glaucoma. It is the only way we can see below the surface of the retina.

Please check the appropriate box(es) below, then sign and date.

I agree to have this health screening and understand there is a \$30 fee.

I decline to have this health screening performed.
